

How HealthyStart® Can Improve Your Child's Health

Make your child's health a priority.

1

Better Sleep

The HealthyStart appliances open the airway and allow for maximum airflow, allowing children to sleep deeper and more relaxed (without all the snoring, nightmares and bedwetting).

2

Improve Grades

Better sleep plays a fundamental role in a child's health. By opening the airway and allowing for the most restful sleep possible, children have the ability to be their most successful selves.

3

Increase Focus

Quality sleep improves memory, executive function and problem-solving during childhood. A person who is sleep-deprived cannot focus properly, and continuous improper sleep has long-term effects on a child's health and focus.

4

Improve Behavior

HealthyStart improves the behavior of children by allowing for maximum airflow and non-interrupted sleep. Quality sleep improves behavior during childhood and allows them to be the healthiest and happiest versions of themselves possible.

5

Straighten Teeth

The HealthyStart System promotes the natural growth of teeth into their correct alignments. Unlike many clear aligners, HealthyStart appliances are completely non-invasive and work with the natural eruption of teeth.

6

Develop Jaw

Our appliances aid in opening the airway and shifting the jaw forward, all while straightening teeth and guiding them into their correct alignments. Regular clear aligners do not address the underdeveloped jaw and force teeth into alignment.
